

The background image shows the interior of a car, specifically the rear passenger area. There are two rows of seats with a modern, sculptural design in a light beige or tan color. The car has large windows that look out onto a city skyline at night, with various lights and building silhouettes visible. The interior lighting is warm and ambient, highlighting the texture of the seats and the carpeted floor.

Swap, do not scrub

One mount, three tiers - from a city shuttle to a luxury cabin

By 2035 one car serves two owners

USE CASE A

Owner-operated

Two hours the owner, the rest a robotaxi.

USE CASE B

Fleet-operated

The same car, 16 hours a day.

SEGMENT

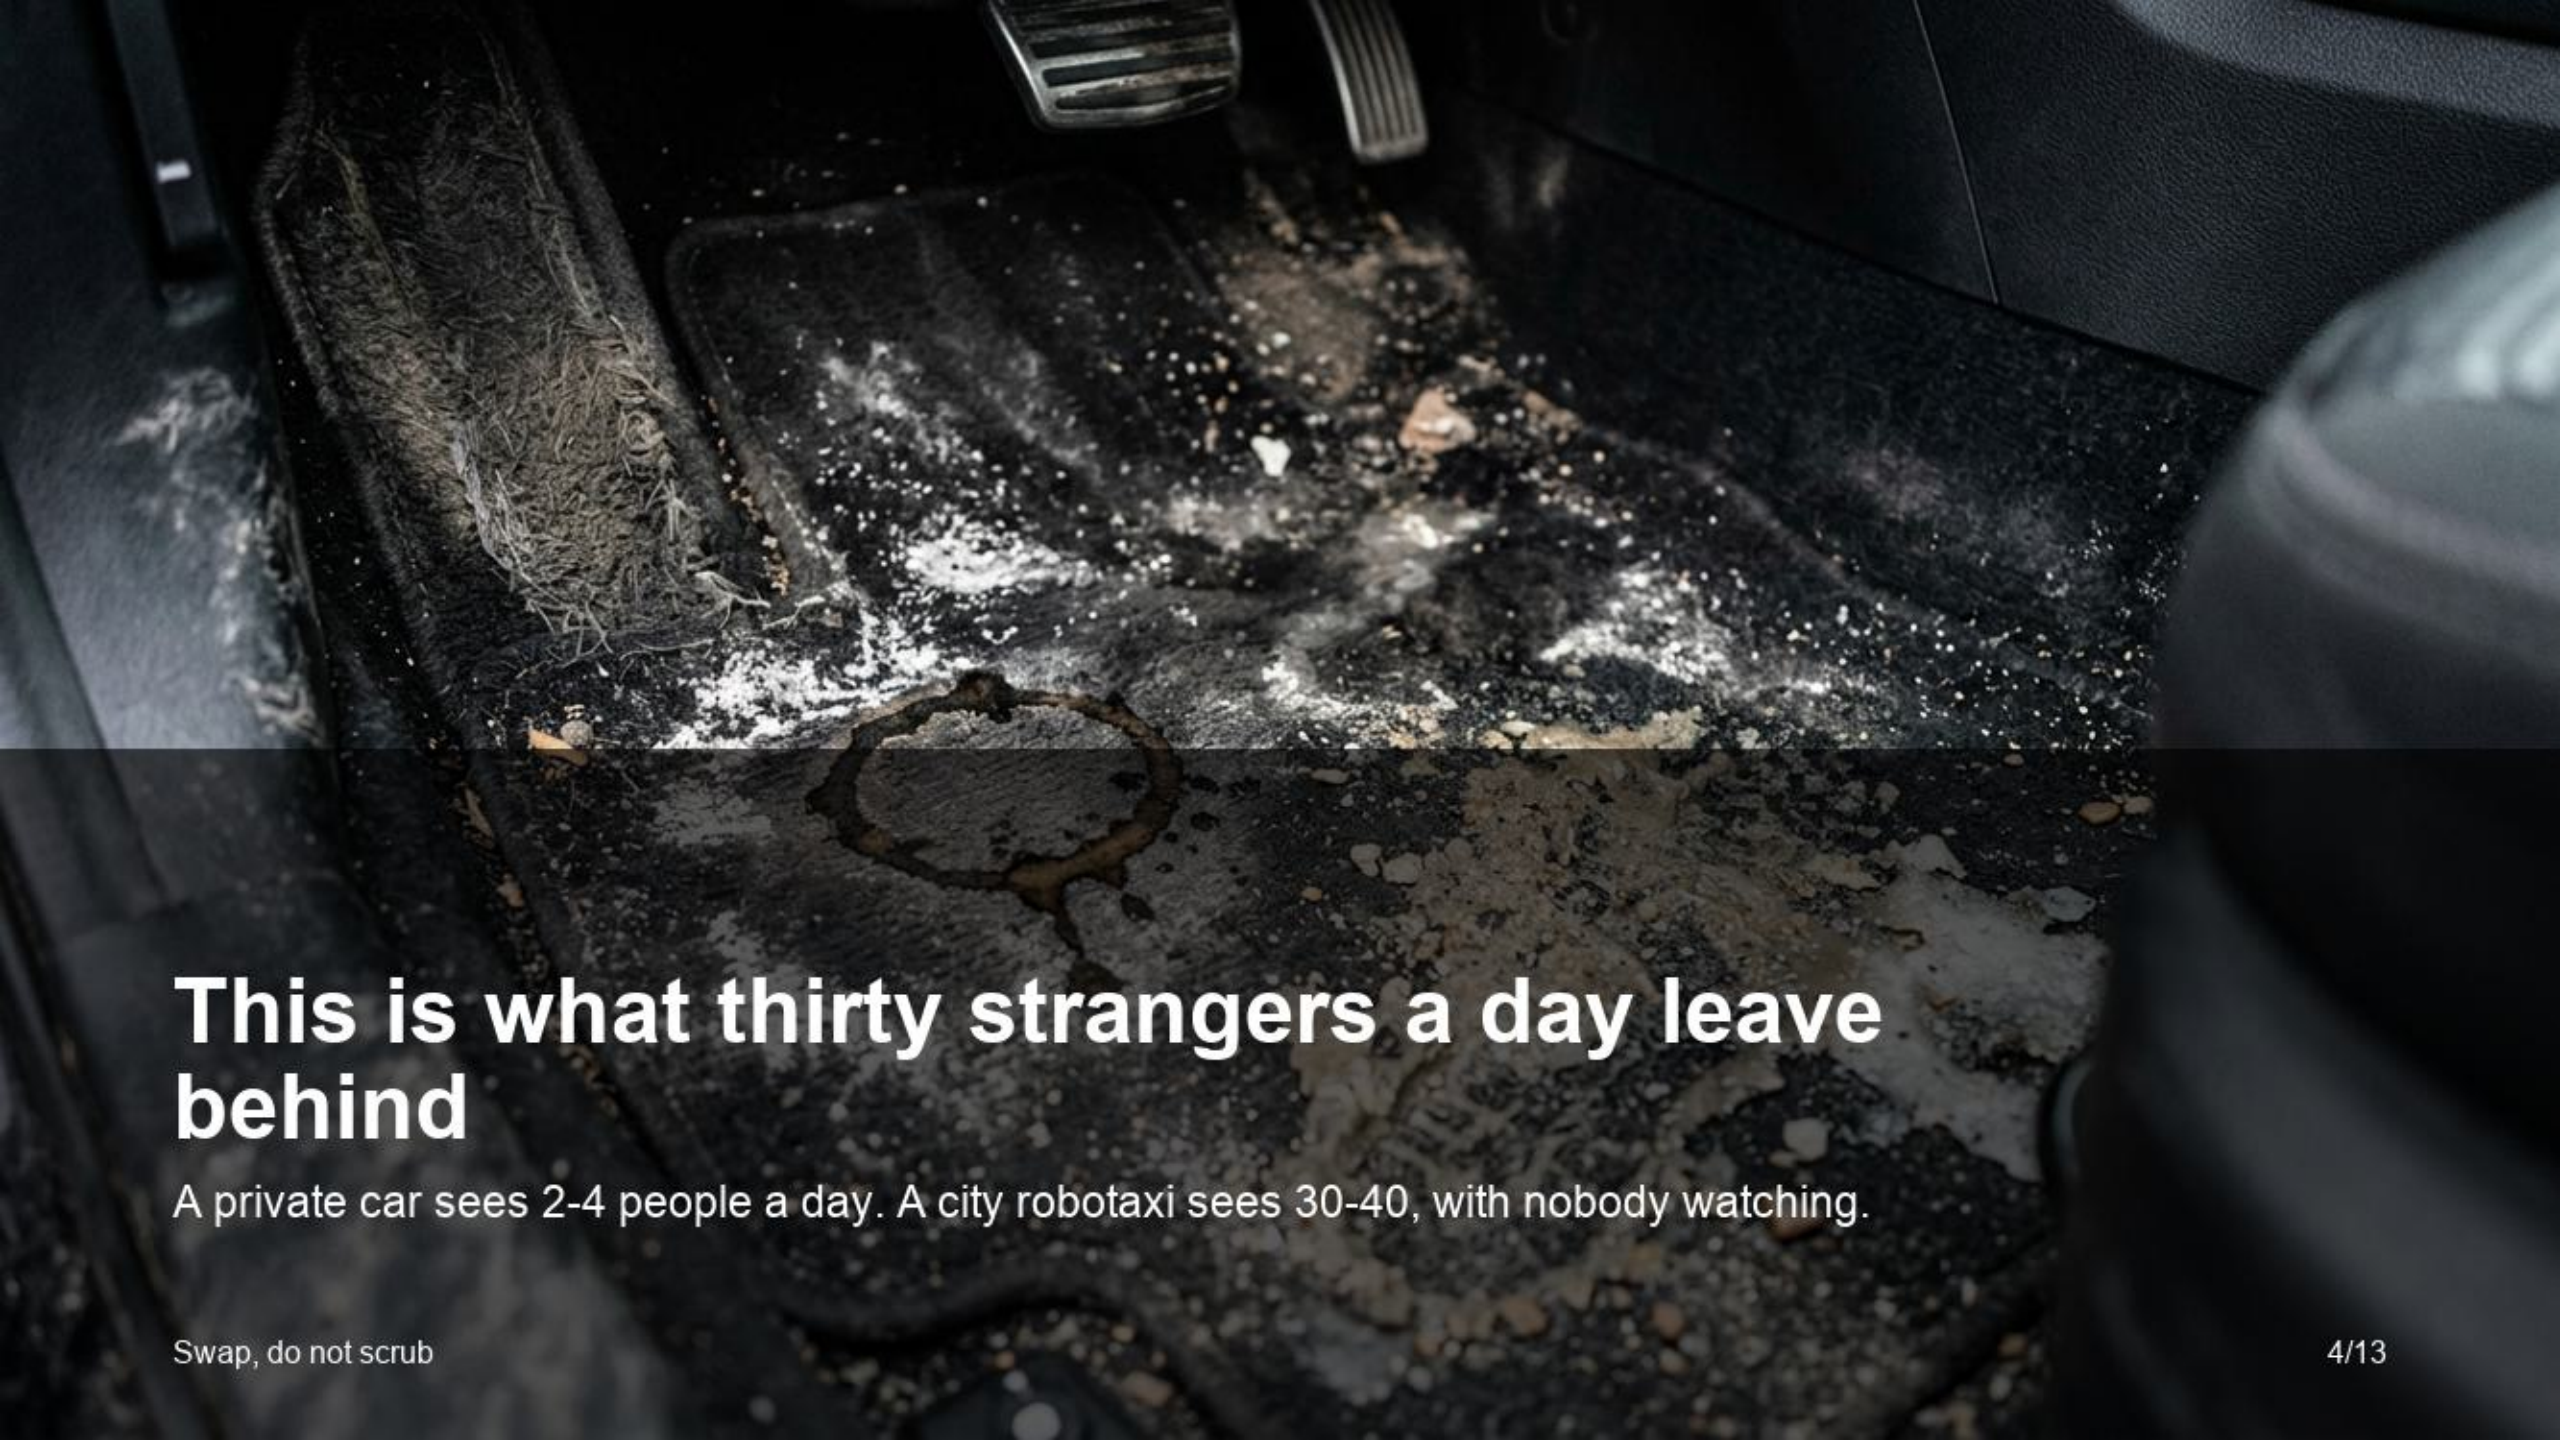

C/D-segment BEV, Level 4

Europe and Switzerland, short distance, city.

WHY NOT THE TRUCK

The truck loses its driver, so its heated mat loses its user

The whole cab interior exists because a human sleeps in it.

This is what thirty strangers a day leave behind

A private car sees 2-4 people a day. A city robotaxi sees 30-40, with nobody watching.

Cleaning is the one thing a robotaxi cannot do while earning

A BASIC INTERIOR CLEAN

30-60 min

heavy soiling doubles or triples it

PER CLEAN

USD 60-150

routine, up to 500 when bad

FOR THE OPERATOR

= downtime

it earns only while carrying people

LEARNING FROM ANOTHER INDUSTRY

A luxury hotel never cleans the mattress

It cleans the layer above it. Each layer has one job, and the one that touches the guest is replaced every time.

A floor that swaps in seconds and is cleaned off the vehicle

The mat becomes a serviceable part.

Wipe-clean skin, mono-material PET

No fibres to hold dirt

Magnetic mount, no visible fasteners

Out in seconds, no tools

Cleaned off the vehicle

The car goes back out, the panel is washed

THE HARDER PROBLEM

A floor you can wipe is a floor that is acoustically dead

Absorption needs an open, porous surface. Cleaning wants a closed one. Today you pick one.

Autoneum has already solved all of it, just never in the same part

We need	Autoneum has	Where it sits
Washable floor	Washable surface flooring	Trucks (Borgers, 2023)
Wipeable yet acoustic	Alpha-Liner	Wheelhouse, outside
Absorb through a closed skin	RIMIC micro-perforation	Heatshields
Cleanability metric	Cleanability Analyzer	Internal lab
Heating layer	(Heated) Floor mats	Trucks

One panel, three layers, every one of them in-house

Wipe-clean skin, micro-perforated

Liquid beads off, sound passes through

Absorber

Hybrid-Acoustics PET, the acoustics

Magnetic mount

No contacts, no cable, lifts out

One mount, three tiers

Each tier adds to the one below. Same interface all the way up.

1 - SHORT DISTANCE

Swap and wipe

Out in seconds, cleaned off the vehicle.

2 - MEDIUM DISTANCE

Quiet and premium

Perforated skin over the absorber. And it looks designed.

3 - LONG DISTANCE

Warm

Heating tracks under the skin. Feel at home.

The image shows the interior of a modern, spacious vehicle, possibly a train or a luxury bus. Four people are seated around a small, round table. On the left, a woman with dark curly hair is smiling. Next to her is a man with a grey beard. Across from them are a woman with blonde hair and a man with dark hair. They are all looking towards each other, engaged in conversation. The table has a few items on it, including a mug and some glasses. Large windows on the sides and top of the vehicle provide a view of a road and trees outside. The interior has a clean, minimalist design with light-colored walls and ceiling.

The warm version is for the journeys people pay extra for

Around 200 W instead of 4,500 - and winter costs an EV 20-40 % of its range. Feel at home.

What we will prove by Friday

- Swap time - panel out, panel in, on a stopwatch
- Cleanability - our skin against a carpet, on Autoneum's index
- Absorption - through a perforated skin
