

The background image shows the interior of a car, specifically the rear passenger area. There are two rows of seats with a modern, curved design. The seats are upholstered in a light-colored fabric. The car's interior is dimly lit, with a warm glow coming from the windows and possibly from the seats themselves. Through the windows, a city skyline at night is visible, with many lights from buildings and streetlights. The overall atmosphere is one of luxury and comfort.

Swap, do not scrub

One mount, three tiers - from a city shuttle to a luxury cabin

By 2035 one car serves two owners

USE CASE A

Owner-operated

Two hours the owner, the rest a robotaxi.

USE CASE B

Fleet-operated

The same car, 16 hours a day. Six million of them by 2035.

SEGMENT

C/D-segment BEV, Level 4

Europe and Switzerland, city.
Autoneum's largest market, 46 % of revenue.

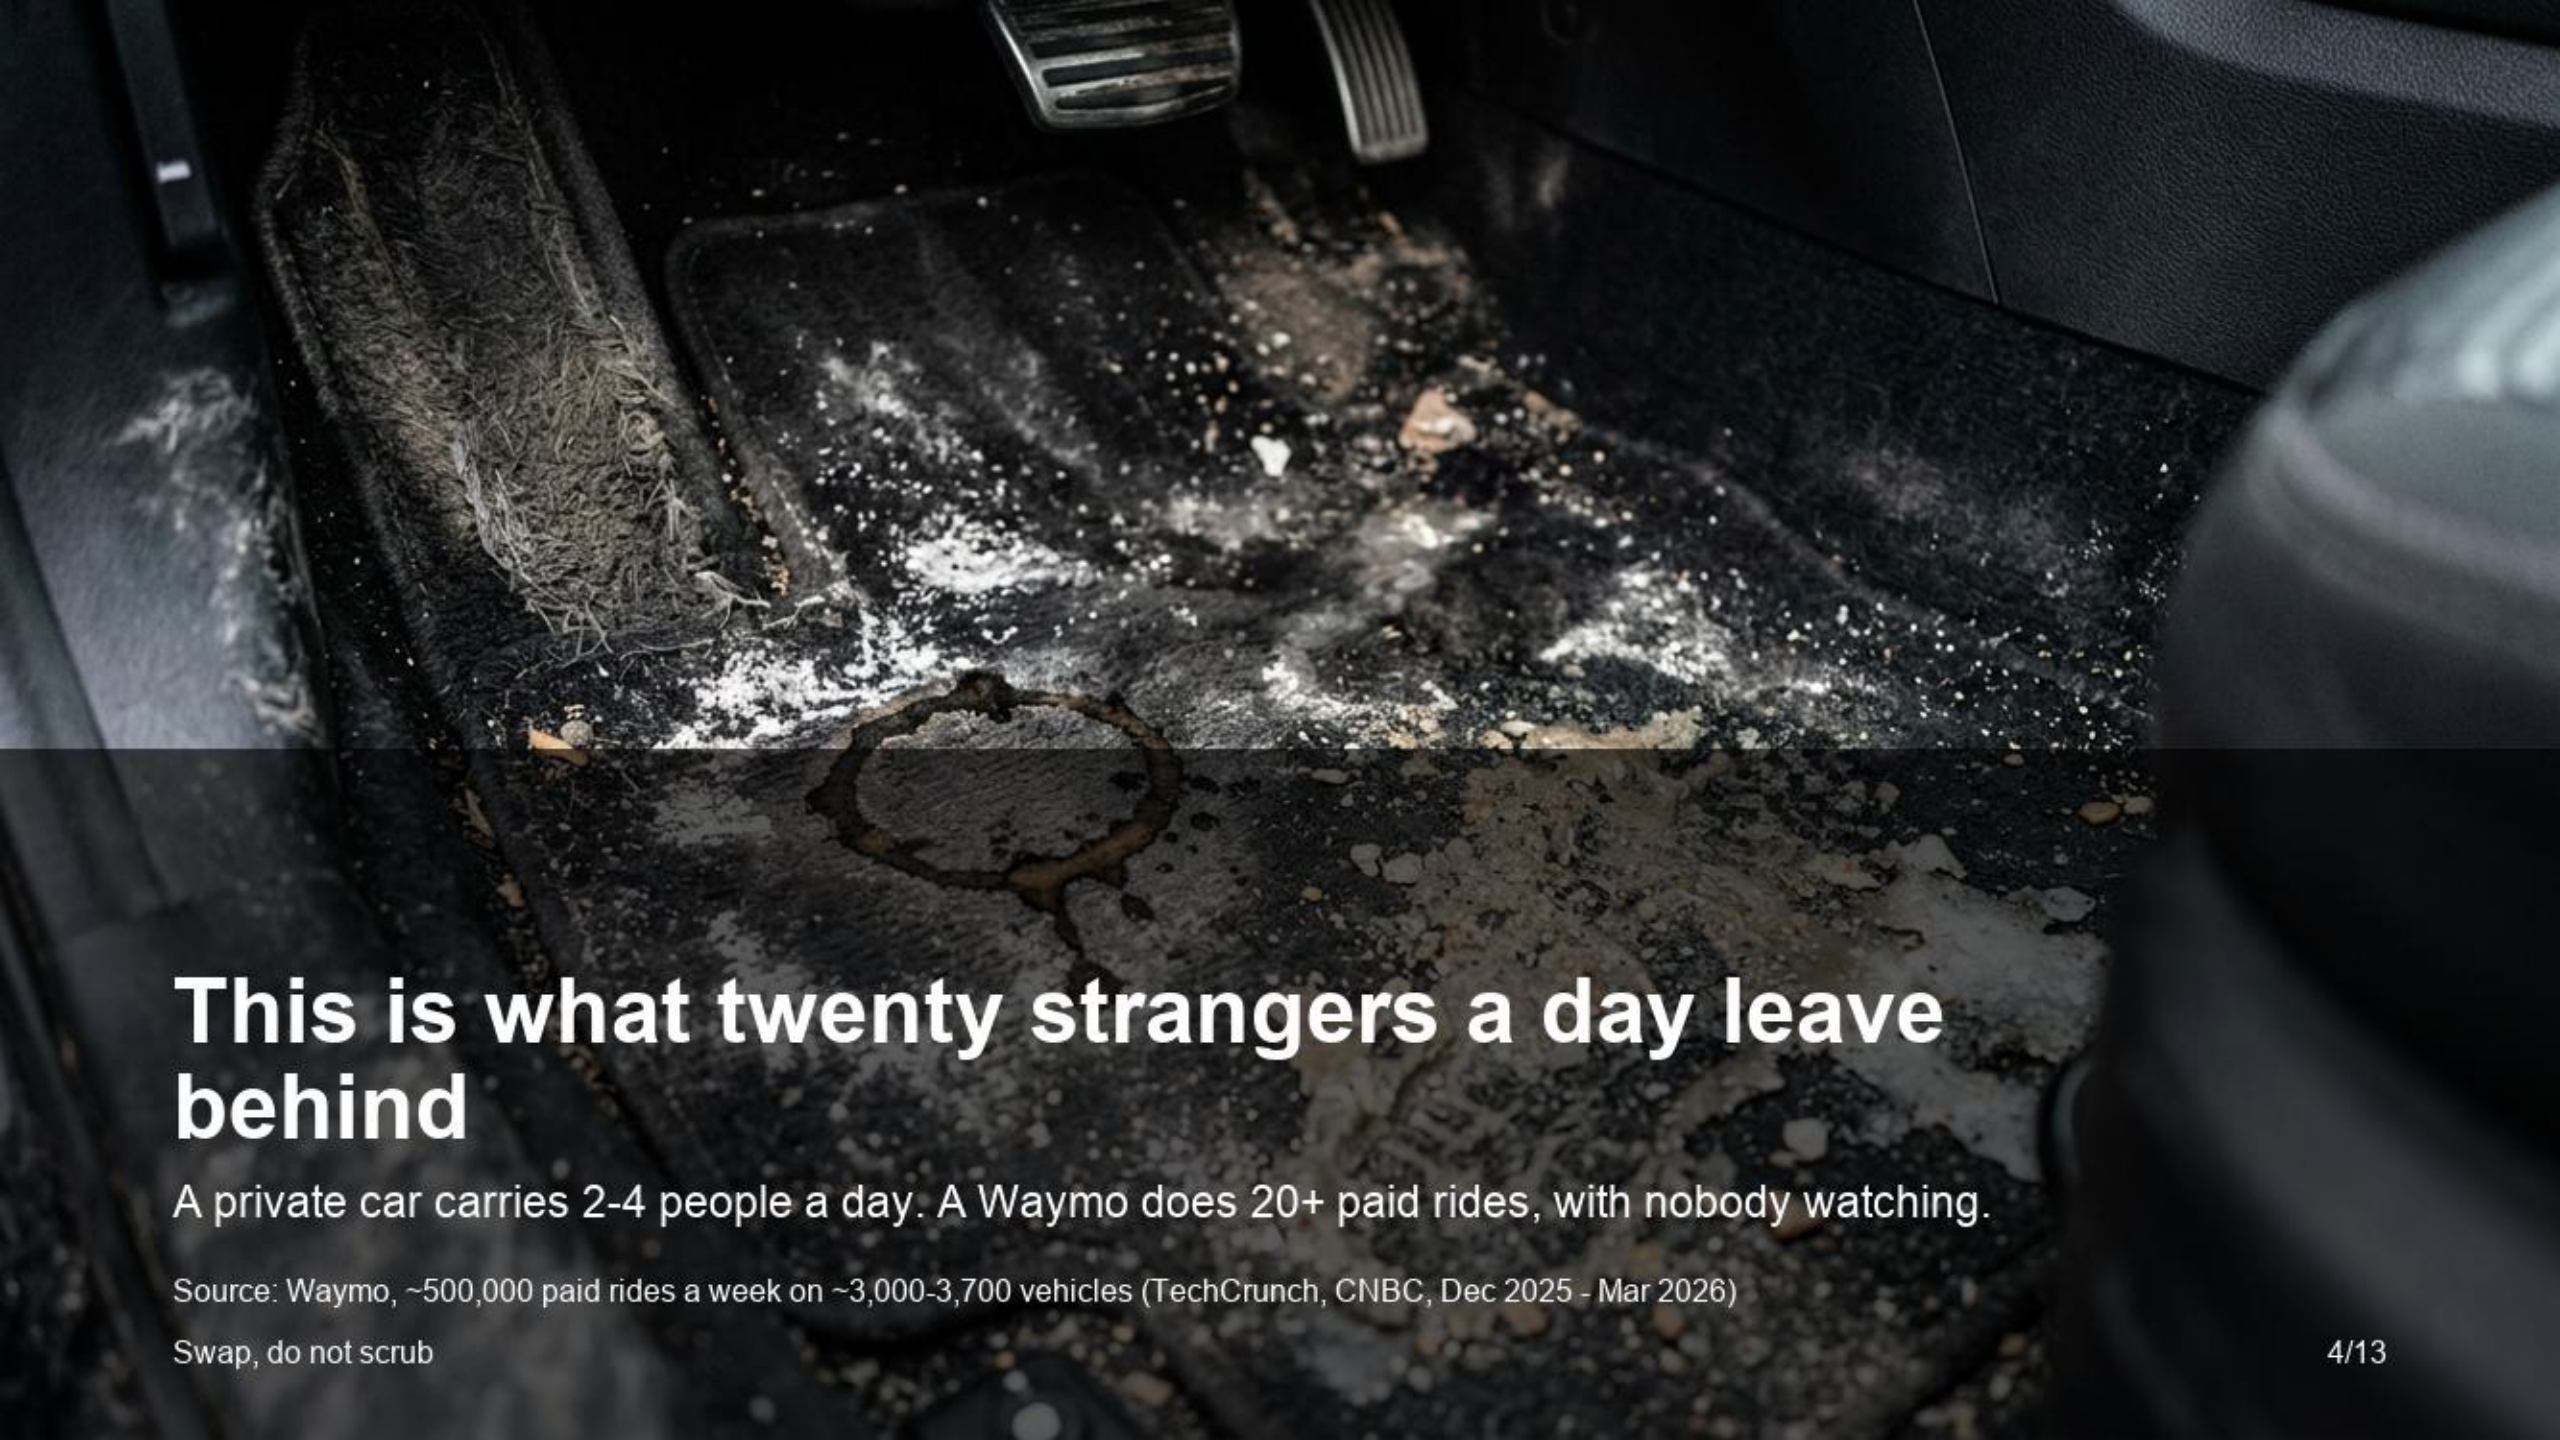

Source: Goldman Sachs, Robotaxis to become a \$400 bn market in 2035 (Apr 2026); Autoneum FY2025 revenue release (Jan 2026)

WHY NOT THE TRUCK

The truck loses its driver, so its heated mat loses its user

The whole cab interior exists because a human sleeps in it.

This is what twenty strangers a day leave behind

A private car carries 2-4 people a day. A Waymo does 20+ paid rides, with nobody watching.

Source: Waymo, ~500,000 paid rides a week on ~3,000-3,700 vehicles (TechCrunch, CNBC, Dec 2025 - Mar 2026)

Swap, do not scrub

Cleaning is the one thing a robotaxi cannot do while earning

A BASIC INTERIOR CLEAN

30-60 min

heavy soiling doubles or triples it

PER CLEAN

USD 60-150

routine, up to 500 when bad

FOR THE OPERATOR

= downtime

it earns only while carrying people

Source: Consumer detailing trade estimates, 2025 (not an automotive study); press reporting on Waymo fleet handlers

Swap, do not scrub

LEARNING FROM ANOTHER INDUSTRY

A luxury hotel never cleans the mattress

It cleans the layer above it. Each layer has one job, and the one that touches the guest is replaced every time.

A floor that swaps in seconds and is cleaned off the vehicle

The mat becomes a serviceable part.

Wipe-clean skin, mono-material PET

No fibres to hold dirt

Magnetic mount, no visible fasteners

Out in seconds, no tools

Cleaned off the vehicle

The car goes back out, the panel is washed

THE HARDER PROBLEM

A floor you can wipe is a floor that is acoustically dead

Absorption needs an open, porous surface. Cleaning wants a closed one. Today you pick one.

Autoneum has already solved all of it, just never in the same part

We need	Autoneum has	Where it sits
Washable floor	Washable surface flooring	Trucks (Borgers, 2023)
Wipeable yet acoustic	Alpha-Liner	Wheelhouse, outside
Absorb through a closed skin	RIMIC micro-perforation	Heatshields
Cleanability metric	Cleanability Analyzer	Internal lab
Heating layer	(Heated) Floor mats	Trucks

Source: Autoneum Challenge deck, 7 Sep 2026, slides 6-7; Autoneum product brochure 2021; Autoneum press release on Borgers, Apr 2023

Swap, do not scrub

One panel, three layers, every one of them in-house

Wipe-clean skin, micro-perforated

Liquid beads off, sound passes through

Absorber

Hybrid-Acoustics PET, the acoustics

Magnetic mount

No contacts, no cable, lifts out

One mount, three tiers

Each tier adds to the one below. Same interface all the way up.

1 - SHORT DISTANCE

Swap and wipe

Out in seconds, cleaned off the vehicle.

2 - MEDIUM DISTANCE

Quiet and premium

Perforated skin over the absorber. And it looks designed.

3 - LONG DISTANCE

Warm

Heating tracks under the skin. Feel at home.

The warm version is for the journeys people pay extra for

Around 200 W instead of 4,500 - and winter costs an EV 20-40 % of its range. Feel at home.

Source: Applied Thermal Engineering 2024; Energy and Buildings 2026; AAA EV range test 2019 (-41 % at -7 C with heating); US DOE VTO 2024

Swap, do not scrub

What we will prove by Friday

- Swap time - panel out, panel in, on a stopwatch
- Cleanability - our skin against a carpet, on Autoneum's index
- Absorption - through a perforated skin
